## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kim et al. (Chem. Eur. J. 2001, pp 176) in view of Tajima et al. (Nucleic Acids Research, Suppl., 2002, Vol. 2, pp. 265-266)

Kim et al. discloses comb-type cationic copolymer expedites DNA strand exchange in hybridization type assays. Page 176 discloses the use of poly(L-lysine)graft-dextran.

Tajima et al. shows that arginine-rich peptide have higher accelerating effect. The reference shows their use in strand displacement within dsDNA which is viewed to be inclusive of instant claims 12-14.

Therefore it would have been obvious at the time the invention was made to one of ordinary skill in the art to use a poly(L-lysine)graft –dextran having a guanidine group containing main chain in order to increase the function of promoting a DNA exchange reaction of the cationic polymer.

Note regarding claim 14 limitation "so as to regulate expression and replication of gene". This is a utility that needs not to be discussed in the prior art. MPEP 2122 .

## **2122 [R-6] Discussion of Utility in the Prior Art**

### **UTILITY NEED NOT BE DISCLOSED IN REF-ERENCE**

In order to constitute anticipatory prior art, a reference must identically disclose the claimed compound, but no utility need be disclosed by the reference. In re Schoenwald, 964 F.2d 1122, 22 USPQ2d 1671 (Fed. Cir. 1992) (The application claimed compounds used in ophthalmic compositions to treat dry eye syndrome. The examiner found a printed publication which disclosed the claimed compound but did not disclose a use for the compound. The court found that the claim was anticipated since the compound and a process of making it was taught by the reference. The court explained that "no utility need be disclosed for a reference to be anticipatory of a claim to an old compound." 964

F.2d at 1124, 22 USPQ2d at 1673. It is enough that the claimed compound is taught by the reference.). >See also Impax Labs. Inc. v. Aventis Pharm. Inc., 468 F.3d 1366, 1383, 8 USPQ2d 1001, 1013 (Fed. Cir. 2006) ("[P]roof of efficacy is not required for a prior art reference to be enabling for purposes of anticipation.").
